# 1 Introduction

## Overview

The FutureGen Interview Automation System is a comprehensive web application designed to streamline the interview process through automated registration, resume analysis, and interview management capabilities.

## 2 Technology Stack

### 2.1 Frontend Architecture

- **Framework:** React 18 with modern hooks and functional components
- **UI Components:** Custom CSS with responsive design, Lucide React icons
- **State Management:** React Context API for global state
- **HTTP Client:** Native fetch API with error handling
- **Routing:** React Router for single-page application navigation

### 2.2 Backend Architecture

- **Framework:** FastAPI (Python) with automatic API documentation
- **Database:** PostgreSQL with JSONB support for flexible data storage
- **ORM:** SQLAlchemy with declarative models
- **Authentication:** JWT (JSON Web Tokens) with secure token handling
- **Migrations:** Alembic for database version control
- **Validation:** Pydantic models for request/response validation

### 2.3 Development Tools

- **Package Management:** npm for frontend, pip for backend
- **API Testing:** FastAPI Swagger UI with interactive documentation
- **Development Server:** Hot reloading for both frontend and backend
- **Environment Management:** Python virtual environments

## 3 Prerequisites

### System Requirements

Ensure the following software is installed on your system before proceeding:

1. **Node.js** (v16.0.0 or higher)
  - Download from: <https://nodejs.org/>
  - Verify installation: `node --version`
2. **Python** (3.9.0 or higher)
  - Download from: <https://python.org/>
  - Verify installation: `python --version`
3. **PostgreSQL** (13.0 or higher)
  - Download from: <https://postgresql.org/>
  - Ensure `psql` command is available
4. **Git** (for version control)
  - Download from: <https://git-scm.com/>
  - Required for cloning the repository

## 4 Project Structure

### Directory Layout

Understanding the project structure is crucial for navigation and development.

```
1 futuregen-interview/  
2     src/  
3         components/           # Frontend React components  
4         pages/                 # Reusable UI components  
5             AdminDashboard.js  # Page-level components  
6             AdminLogin.js      # Admin interface  
7             User.js            # Admin authentication  
8             context/           # User interface  
9             utils/             # React Context providers  
10            styles/            # Utility functions  
11            App.js              # CSS stylesheets  
12            index.js            # Main application component  
13        backend/                # Application entry point  
14            models/             # Python FastAPI backend  
15                user.py         # SQLAlchemy database models  
16                registration.py  # User model  
17            routes/             # Registration model  
18                auth.py         # API route handlers  
19                users.py        # Authentication routes  
20                registrations.py # User management routes  
                                # Registration routes
```

```
21         schemas/                # Pydantic validation schemas
22         database.py              # Database configuration
23         dependencies.py          # FastAPI dependencies
24         main.py                  # FastAPI application entry
point
25     alembic/                     # Database migration files
26         versions/               # Migration version files
27         env.py                  # Alembic environment config
28         alembic.ini             # Alembic configuration
29     .env.example                 # Environment variables template
30     requirements.txt            # Python dependencies
31     package.json                # Node.js dependencies and scripts
```

Listing 1: Complete Project Structure

## 5 Setup Instructions

### 5.1 Backend Setup

#### 5.1.1 Virtual Environment

```
1 # Create virtual environment
2 python -m venv venv
3
4 # Activate virtual environment
5 # On Windows:
6 venv\Scripts\activate
7 # On macOS/Linux:
8 source venv/bin/activate
9
10 # Verify activation (should show venv path)
11 which python
```

Listing 2: Create Python Virtual Environment

#### 5.1.2 Install Dependencies

```
1 # Install all required packages
2 pip install -r requirements.txt
3
4 # Verify installation
5 pip list | grep fastapi
6 pip list | grep sqlalchemy
```

Listing 3: Install Python Packages

#### 5.1.3 Environment Configuration

Create a `.env` file in the project root directory:

```
1 # Database Configuration
2 DATABASE_URL=postgresql://username:password@localhost:5432/futuregen_db
3 DB_HOST=localhost
4 DB_PORT=5432
```

```
5 DB_NAME=futuregen_db
6 DB_USER=your_username
7 DB_PASSWORD=your_password
8
9 # Security Configuration
10 SECRET_KEY=your-super-secure-secret-key-here-min-32-chars
11 ALGORITHM=HS256
12 ACCESS_TOKEN_EXPIRE_MINUTES=30
13
14 # Application Configuration
15 DEBUG=True
16 API_V1_STR=/api
17 PROJECT_NAME="FutureGen Interview Automation"
18
19 # CORS Configuration
20 ALLOWED_HOSTS=["localhost", "127.0.0.1"]
21 CORS_ORIGINS=["http://localhost:3000", "http://127.0.0.1:3000"]
```

Listing 4: Environment Variables (.env file)

### 5.1.4 Database Setup

```
1 # Connect to PostgreSQL as superuser
2 psql -U postgres
3
4 # Create database and user
5 CREATE DATABASE futuregen_db;
6 CREATE USER your_username WITH PASSWORD 'your_password';
7 GRANT ALL PRIVILEGES ON DATABASE futuregen_db TO your_username;
8
9 # Exit PostgreSQL
10 \q
11
12 # Test database connection
13 psql -U your_username -d futuregen_db -h localhost
```

Listing 5: PostgreSQL Database Setup

### 5.1.5 Database Migrations

```
1 # Navigate to project root
2 cd /path/to/futuregen-interview
3
4 # Run migrations
5 alembic upgrade head
6
7 # Verify tables were created
8 psql -U your_username -d futuregen_db -c "\dt"
```

Listing 6: Run Database Migrations

## 5.2 Frontend Setup

```

1 # Install all npm packages
2 npm install
3
4 # Verify installation
5 npm list react
6 npm list @testing-library/react

```

Listing 7: Install Node.js Dependencies

## 6 Database Schema

### 6.1 Users Table

Column	Type	Constraints	Description
id	Integer	Primary Key, Auto Increment	Unique user identifier
user_name	String(100)	Not Null	Display name for the user
email	String(255)	Unique, Not Null	User's email address (login)
password	String(255)	Not Null	Hashed password using bcrypt
is_admin	Boolean	Default: False	Administrative privileges flag
created_at	DateTime	Default: Now	Account creation timestamp
updated_at	DateTime	Default: Now, Auto Update	Last modification timestamp
is_active	Boolean	Default: True	Account status flag

### 6.2 Registrations Table

Column	Type	Constraints	Description
id	Integer	Primary Key, Auto Increment	Unique registration identifier
name	String(200)	Not Null	Applicant's full name
email	String(255)	Not Null	Applicant's email address
registration_id	String(50)	Unique, Not Null	System-generated ID
status	String(50)	Default: 'pending'	Processing status
submitted_at	DateTime	Default: Now	Submission timestamp
resume_data	JSONB	Nullable	Parsed resume information
interview_data	JSONB	Nullable	Interview responses and scores
resume_comparison	JSONB	Nullable	Resume analysis results
created_at	DateTime	Default: Now	Record creation timestamp
updated_at	DateTime	Auto Update	Last modification timestamp

## 7 User Management

## 7.1 Creating Admin User

### 7.1.1 Using Seed Script

```
1 # Run the seed script
2 python seed_users.py
3
4 # This creates:
5 # - Admin user: admin@futuregen.com / admin123
6 # - Regular user: user@futuregen.com / user123
```

Listing 8: Automated User Creation

### 7.1.2 Manual API Creation

```
1 curl -X POST "http://localhost:8000/api/users/register" \
2     -H "Content-Type: application/json" \
3     -d '{
4         "user_name": "System Administrator",
5         "email": "admin@futuregen.com",
6         "password": "SecureAdminPassword123!",
7         "is_admin": true
8     },'
```

Listing 9: Create Admin via API

## 8 Running the Application

### 8.1 Development Environment

#### 8.1.1 Start Backend Server

```
1 # Ensure virtual environment is activated
2 source venv/bin/activate # or venv\Scripts\activate on Windows
3
4 # Start FastAPI server with hot reload
5 uvicorn backend.main:app --reload --host 0.0.0.0 --port 8000
6
7 # Server will be available at:
8 # API: http://localhost:8000
9 # Swagger UI: http://localhost:8000/docs
10 # ReDoc: http://localhost:8000/redoc
```

Listing 10: Backend Development Server

#### 8.1.2 Start Frontend Server

```
1 # In a new terminal, start React development server
2 npm start
3
4 # Frontend will be available at:
5 # http://localhost:3000
```

Listing 11: Frontend Development Server

## 9 Troubleshooting

### 9.1 Common Database Issues

#### Database Connection Errors

Issues related to database connectivity and configuration.

#### PostgreSQL Service Not Running

```
1 # Check PostgreSQL status
2 systemctl status postgresql # Linux
3 brew services list | grep postgresql # macOS
4 sc query postgresql-x64-13 # Windows
5
6 # Start PostgreSQL service
7 systemctl start postgresql # Linux
8 brew services start postgresql # macOS
9 net start postgresql-x64-13 # Windows
```

#### Database Connection Refused

- Verify PostgreSQL is running on the correct port (default 5432)
- Check .env file for correct database credentials
- Ensure database futuregen\_db exists
- Verify user permissions on the database

#### Migration Errors

```
1 # Reset migrations if needed
2 alembic stamp head
3 alembic revision --autogenerate -m "Reset database"
4 alembic upgrade head
5
6 # Check current migration status
7 alembic current
8 alembic history
```

### 9.2 Python Environment Issues

#### Package Installation Errors

```
1 # Upgrade pip first
2 python -m pip install --upgrade pip
3
4 # Clear pip cache if needed
5 pip cache purge
6
7 # Install with verbose output for debugging
8 pip install -r requirements.txt -v
```

#### Virtual Environment Issues

```

1 # Recreate virtual environment
2 deactivate # if currently activated
3 rm -rf venv # remove old environment
4 python -m venv venv # create new environment
5 source venv/bin/activate # activate
6 pip install -r requirements.txt # reinstall packages

```

## 9.3 Frontend Connection Issues

### CORS Errors

- Verify backend CORS configuration in `main.py`
- Check that frontend URL is in `CORS_ORIGINS` list
- Ensure both servers are running on expected ports

**Proxy Configuration** Add to `package.json` if needed:

```

1 {
2   "name": "futuregen-frontend",
3   "proxy": "http://localhost:8000",
4   ...
5 }

```

## 10 Maintenance Scripts

### 10.1 Database Management

Script	Description
<code>python create_new_tables.py</code>	Creates or updates database tables as per schema changes
<code>python seed_users.py</code>	Seeds initial admin and user accounts for development

### 10.2 Development Utilities

Command	Description
<code>uvicorn backend.main:app --reload</code>	Starts backend server in development mode with hot reload
<code>npm install</code>	Installs frontend dependencies from <code>package.json</code>
<code>npm start</code>	Starts frontend development server with hot reload
